Hytech Forming Systems USA, Inc. announces the launch of their new long format high pressure-forming machine.

Hytech Forming Systems a global leader in high pressure forming and embossing equipment, process, and tooling announces the launch of a new long format AccuForm® press. The new long format machine will utilize the patented AccuForm® process to form sheet sizes up to 32 x 14 inches (813mm x 356mm). The new LD32 AccuForm® machine will also have enhanced depth of draw capabilities allowing for depth of draw up to 2" (50mm).

Over the past 5 years the demand for tight tolerance graphic repeatability has migrated to larger and larger parts. This trend is being driven by the appliance and automotive industries seeking to integrate graphics and function on large parts. The recent addition of in-molded electronics will continue to push the limits of 3 dimensional film insert molding. The industry leading graphic repeatability of Hytech's AccuForm process combined with the new long format will give OEMs the flexibility to integrate aesthetics and function into larger injection molded control panels and center stacks.
